

The bar is in a good place

Every piece of the room is now its own layer, perfected one at a time and approved by you. Monday the characters go into the scene.

TONIGHT'S PLATE

The floating-slab back bar you chose, the marble bars with straight edges, the window as one pane from the bar to the crown with the mirrored sign, the bartender's ledge run clean into the window wall. Chairs and characters are out on purpose until they are recreated from the bibles.

THE LITTLE THINGS PERFECTED TODAY

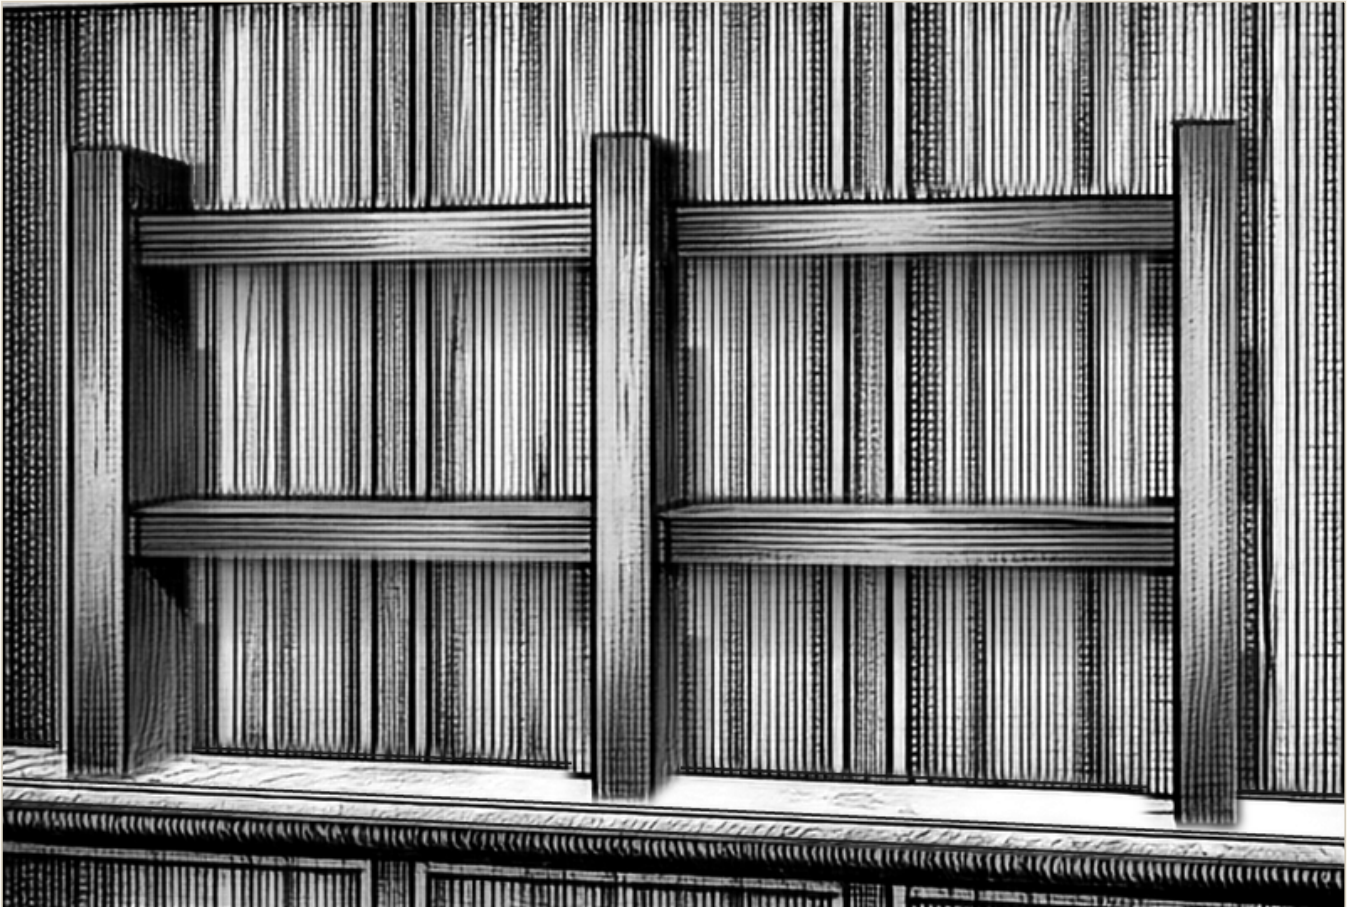

- The arched bar end that read as a second chair back: found at the root and gone.
- The shelf unit: three designs, three rounds, yours is the floating slabs.
- No cabinets under the ledge; the ledge runs into the window wall.
- The sill and the rail under the pane: replaced by one clean line on the marble.
- The sign: Franklin Gothic, lifted clear of the hot-dog cart.
- Every object versioned, every version restorable, a desk to move layers.

MONDAY

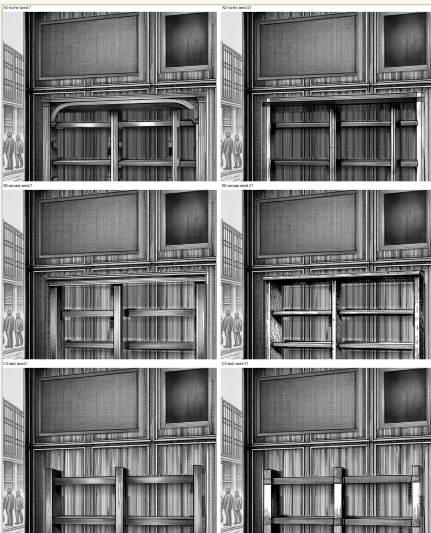

Drew and Barclay take their chairs, recreated from their character bibles with a pose set for the captions, Abby when the joke needs her.

The floating-slab back bar

Two heavy walnut slabs housed into three posts on the marble ledge, the wall's own panelling open behind and above them.

Three designs were drawn in code and torn apart by critics before any render: a built-in niche, a framed carcass, and these slabs. The first renders failed for a mechanical reason we then fixed for good: shadows drawn into a layer's outline reach the model as flat grey and come back as smears, so shadows are now a separate layer applied to the rendered wall. You chose the slabs at seed 7.

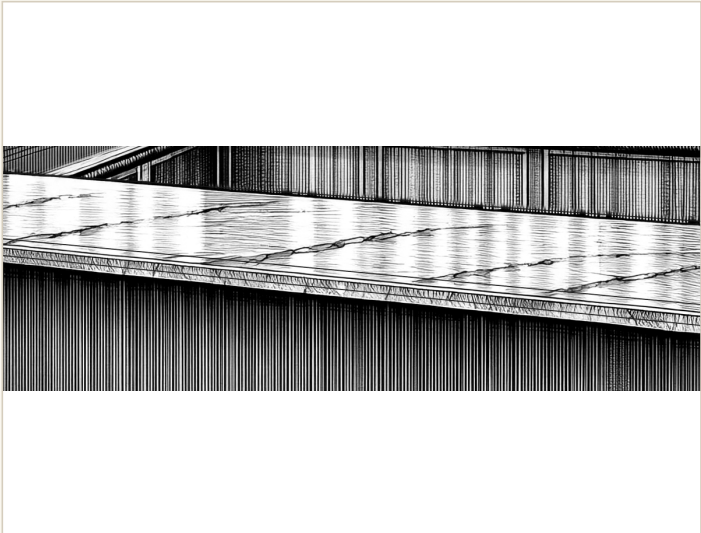

The marble bars and their straight edges

What looked like a duplicate chair back on the bar was a flaw in how the parts were cut; the bar's edge now measures straight.

BEFORE

AFTER

Every part's block-in used to be cut from one drawing the chairs had painted over, so the counter, the cabinets and the ledge each carried a chair back inside their own outline and drew it as bar. Each part now has its own drawing with nothing in front of it; the three were re-rendered in order and judged on a rebuilt plate by a straight-edge check: 6 pixels of deviation, down from 31. The marble's meeting with the wall and both edges of its lip are inked from the geometry after the render, so they stay straight whatever the model does.

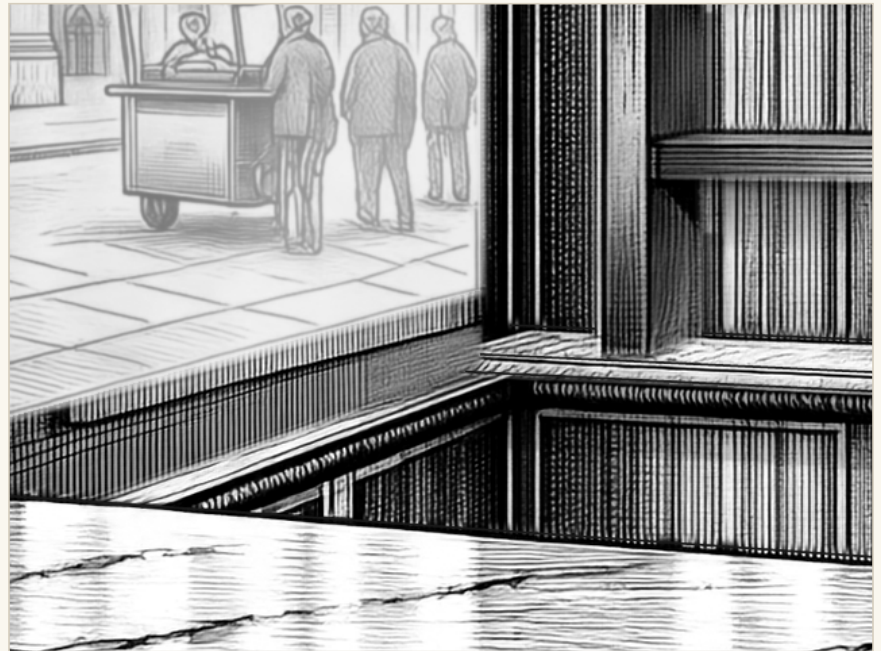

counter - every version, oldest first

v001 s4 candidate	v002 s7 candidate	v003 s11 candidate	v004 s21 candidate
v005 s33 candidate	v006 approved	v007 s7 chairs off approved into the plate 2026-09-05 15:20 - in...	v008 s4 arched (replaced) founder: duplicate chair back - replaced by s7
v009 s7 chairs off, per-part values rejected: plate edge worst 33.9 px, cap 9.0 px (b...)	v010 s21 chairs off, per-part values approved 2026-09-05 (chairs off, per-part valu...)	v011 s33 chairs off, per-part values rejected: plate edge worst 6.0 px, cap 10.0 px (b...)	v012 s44 chairs off, per-part values rejected: plate edge worst 25.3 px, cap 8.0 px (b...)

EVERY VERSION OF THE COUNTER, ON FILE

The window, the sign and the corner

One pane from the marble to the crown, the sign readable and classy, the ledge run clean into the wall.

Under the pane there used to be four stacked members that read as a railing, then a marble sill you disliked. Now the sash sits on the marble: one line, then stone. The bartender's ledge runs all the way into the window wall, its edge one thin square lip like the main bar's, its shadow on the panelling a layer rather than a drawn band. The sign is Franklin Gothic Medium, mirrored as you asked, lifted so DOOR clears the cart's umbrella.

The screens, and how the room is built now

Blank by design: the joke fills them. Underneath, every object is a layer you can swap, move, hide or roll back.

The television and the chalkboard stay blank in the plate; the day's footage and chalk go in last, on measured corners. The room itself is now a kit: each object is rendered from its own construction drawing against the finished plate and laid through its own silhouette, so re-rolling one never moves another. Every candidate of every object is filed with its seed and verdict, any earlier version can be put back with one command, and a local desk lets a layer be dragged, hidden or swapped to an older version without a render. Today's full record is in the daily report, entries 088 to 197.

What was asked, what was done, what came of it

Including the misses, because that is where the rules came from.

1. Founder: "fix the seats and the leather", "there is a wall behind the shelves", "a little better text". Chairs redrawn with a padded seat the back sits on; the shelf carcass lost its false backs; sign set in Bahnschrift. Result: chairs still ribbed, shelves flat - REJECTED by the founder ("you messed up the shelves ... a duplicate back of the chairs carried over to the bar").
2. Founder: "remove the chairs and see what the bar looks like ... remove the shelf, look at the wall ... build the shelf separately ... use opus teammates ... everything organised and labelled ... stickers we can drag and drop". Chairs and shelves switched OFF; the bare bar and wall built and shown.
3. Root cause of the "duplicate chair back" (Opus teammate, verified): every part's block-in was cut from ONE image the chairs had painted over, so the counter, cabinets and ledge each had a chair back inside their own outline. Fix: a values image per part. Bar parts re-rendered in order, each judged on a rebuilt plate by a straight-edge check (6 px, was 31). The bar is clean.
4. Wall check (teammate): geometry correct to a few px; render reeded. A positive-only prompt rewrite was tried on four seeds and was worse - current wall kept.
5. Tools built and verified (teammates): per-object version history (history// INDEX.md + SHEET.png, restore any version), stickers cut exactly as the assembler tones them (compose reproduces the plate to 0.07 grey levels), a local drag-and-drop desk (node scripts/sticker-desk.mjs).
6. Shelf unit, three rounds: round 1 and 2 rejected by two critics each before rendering (the unit's right end was OUTSIDE the frame - the "missing divider"); round 2's first renders smeared because cast shadows sat inside the masks -> shadows became a code layer applied to the rendered wall; round 3 rendered clean. Founder chose C slab seed 7 (two floating walnut slabs on three posts):
HIGHLIGHT OF THE DAY. Cabinets removed at his request.
7. Founder: "perfect the signage ... a better window sill ... the little railing near the window". A review round (one Opus reviewer per part) diagnosed the railing as four members stacked under the pane; a designer replaced them with ONE marble sill; the sign moved to Franklin Gothic Medium and lifted clear of the cart.
8. Founder: "add in drew and barclay and the chairs". Chairs back on; Drew and Barclay added as new parts seated in the chairs (block-ins at the cast plan's geometry, silhouettes cut by the chair backs, the characters' canon prompt blocks). Drew seed 7 approved; Barclay swept next.

Standing rules learned today: a part's block-in must never contain what stands in front of it; shadows are code, not block-in; an object the frame cuts on any side gets re-imagined; when a region keeps growing the same wrong object, change what the block-in resembles; one object at a time, shown before it goes in.

The characters go into the scene

Drew and Barclay in their chairs, recreated from the bibles; Abby when the caption needs her.

The three character bibles were read end to end and the plan is written. Because the local renderer draws every pixel from noise and cannot hold a face from a reference, each character is rendered in context from a posed block-in with the bust and head tile as references, and the approved head is then placed in code. Seventeen poses across the three - resting, turned to the other, speaking, reacting, looking at the television, deferring to Abby - each a layer of its own, so a caption changes who looks at whom by swapping layers, never by re-rendering. The eyes come from the bibles: knowing, human, huggable; the plumage and the fur each their own texture.

TWO DECISIONS NEEDED FIRST

- Drew's bill: the master prompt calls the black a marking with a blunt cap; the bible says it is the outer third of the bill with one bright ribbon. Which wins?
- Drew's locked master: the manifest names the full-body sheet; the bible says the approved plates supersede the sheets. Which is the reference?
