

PROGRESS & DIRECTION / PREPARED FOR RICK

The room is becoming a system.

A clear record of what moved forward today, what the current drawing proves, and what we should improve next.

TODAY'S ASSEMBLED ROOM

Working study, captured this afternoon. The room is assembled; the bottles and cast are being held back.

REVIEW COPY

The room is not approved yet.

Rick, today the project moved from whole-picture experiments into a working piece-by-piece build. The viewpoint, room, lighting and each major object can now be handled separately.

WHAT CHANGED

Measured first

The construction and lighting plans now guide the image before detail is added.

Built in pieces

Shelves, fixtures, street, counter and chairs can be replaced one at a time.

New York is outside

A modern street, hot-dog cart and indistinct people now sit behind the window.

The decision now: settle the wall, window and bar as one believable room. Then finish the shelves and bottles. The cast comes after the room holds together.

TODAY'S BIGGEST STEP

Draw it. Light it. Render it.

The room now begins with fixed geometry and a shared lighting plan. That gives the local drawing process a dependable target instead of asking it to invent the architecture each time.

01 CONSTRUCTION

One measured drawing fixes the wall, window, counter, furniture and every replaceable area.

02 LIGHT & SHADE

A separate value study establishes the bright window, darker room and shared direction of the light.

03 EMPTY ROOM

The room can be rendered by itself before shelves, fixtures, street, bottles or characters are accepted.

WHY THIS MATTERS

If the upper shelf needs another pass, the window and counter can stay untouched. If the lighting changes, the same plan can be carried through each piece. The method protects good work while one problem is corrected.

THE MODULAR BUILD

Built like a puzzle.

Today's files show the exact direction we wanted: a stable room with separate pieces that can be reviewed, replaced and assembled again.

THE BACKBAR

The cabinet and two empty shelves can be replaced without redrawing the street, counter or room.

THE STREET OUTSIDE

The window now carries a modern building, hot-dog cart and anonymous passersby on its own layer.

This is an earlier checkpoint; the outside view remains while the room pieces continue to change.

LOWER BOTTLE-ROW TEST

These bottle rows prove they can be rebuilt independently. Both are deliberately switched off while spacing, scale and shelf contact are corrected.

UPPER BOTTLE-ROW TEST

placed in today's assembly

2

bottle rows held back

THE CURRENT DRAWING

Proof of the method. Still a study.

The assembled room is useful because it shows both the progress and the exact problems to solve before this becomes the permanent scene.

Current working assembly — no cast, bottle rows held back, and still awaiting Rick's review.

WORKING NOW

- The wall, window, shelves, fixtures, street, counter and chairs assemble into one scene.
- The street stays inside the window and can be replaced on its own.
- The shelves can be reviewed empty before any bottles return.

WHAT STILL LOOKS WRONG

- 1 Clean the wall/window corner and the left lamp's overlap.
- 2 Soften the hard triangular lamp light, especially on the right.
- 3 Unify the two chairs; their ink and tone do not match.
- 4 Remove the dark/light seams around the shelf cabinet.
- 5 Reduce the mechanical wall hatching and improve the window name.

The right order protects the picture: room first → shelves and bottles → cast → caption.

RICK'S STUDIO

The work now has a home.

The redesigned private studio brings the archive, current room, progress reports, newspaper work and shared notes into one calm place.

A CLEAR FRONT DOOR

The site is centered on Rick's independent cartoon studio and the work currently on the drawing board.

EVERY VERSION IN ONE PLACE

Search, dates and cast filters make finished work, experiments and room pieces easier to inspect.

1,641
unique images available to explore

1,926
source files accounted for

285
duplicate copies grouped

WHAT RICK CAN DO THERE

Find the cast

Browse Drew, Barclay, Abby and shared scenes without hunting through folders.

Follow the work

See room studies, daily explanations and the decisions still open for review.

Shape what comes next

Use private notes, the newspaper page and Naples topic desk as one working conversation.

Next archive safeguard: give every new drawing its own dated version so an earlier image is never overwritten. Today's room work joins the private studio after the review set is settled.

THE PUBLICATION GOAL

A real newspaper page is the finish line.

The editorial proof shows how a finished cartoon can live beside real columns, a headline and a readable caption. The current proof uses Drew and Barclay; Abby returns only when her appearance is right.

EDITORIAL LAYOUT PROOF

Drew and Barclay appear with the matching rate-hike caption. This is a design proof, not a published edition.

THE PATH FROM HERE

- 1 Approve the base room**
Judge the wall, window and counter together before accepting detail.
- 2 Finish the shelves**
Make both cabinets logical, then rebuild and review each bottle row.
- 3 Bring in the cast**
Place Drew and Barclay after the room is stable. Abby returns only with the right likeness.
- 4 Choose the day's subject**
Use timely Naples financial interest as a lead, then confirm what readers respond to.
- 5 Set the newspaper page**
Write a short caption, build locally on the RTX 4090, inspect closely and prepare the page.

CURRENT NAPLES LEADS

Property tax • Home insurance • Mortgage rates

Google Trends can surface possible subjects. The correct Analytics view still needs to be connected before audience response guides the daily choice.

The aim: a believable room, dependable characters and one clear observation that earns its place on the page.
